

A scatter plot showing the relationship between Measured Fitness (x-axis) and Predicted Fitness (y-axis). The x-axis ranges from -0.25 to 1.00, and the y-axis ranges from -0.25 to 1.00. A dashed diagonal line represents the identity line (y = x). Data points are colored by group: grey, blue, orange, green, purple, red, and pink. Most points are clustered around the identity line, indicating a strong positive correlation between measured and predicted fitness.

## Predicted Fitness
