

A scatter plot showing the relationship between predicted values (x-axis) and observed values (y-axis). The x-axis ranges from -0.2 to 0.8, and the y-axis ranges from -0.2 to 0.8. A dashed diagonal line represents the identity line (y=x). Data points are colored based on their magnitude: red for values between 0.2 and 0.5, orange for values between 0.4 and 0.7, yellow for values between 0.6 and 0.8, green for values between 0.7 and 0.9, blue for values between 0.8 and 1.0, and grey for values between 0.9 and 1.1. The points are scattered around the identity line, indicating a positive correlation but with some dispersion.
