

A scatter plot showing the relationship between Measured Fitness (x-axis) and Predicted Fitness (y-axis). The x-axis ranges from -0.25 to 1.50, and the y-axis ranges from -0.25 to 1.50. A dashed diagonal line represents the identity line (y = x). Data points are colored by group: blue, grey, yellow, purple, green, orange, light blue, and red. Most points are clustered around the identity line, indicating good predictive performance, though there is some scatter, particularly for the blue and grey groups at lower fitness values.
