

A scatter plot showing the relationship between Measured Fitness (x-axis) and Predicted Fitness (y-axis). The x-axis ranges from approximately -1.8 to 0.5, with major ticks at -1.5, -1.0, -0.5, and 0.0. The y-axis ranges from approximately -1.8 to 0.5, with major ticks at -1.5, -1.0, -0.5, and 0.0. A dashed black line represents the identity line (y = x). Data points are colored by group: light blue, orange, yellow, dark blue, purple, red, green, and grey. The grey points are most numerous and are clustered around the identity line, particularly in the upper right quadrant. Other groups are more sparsely distributed, with some points showing significant deviation from the identity line.
