

A scatter plot showing the relationship between Measured Fitness (x-axis) and Predicted Fitness (y-axis). The x-axis ranges from 0.0 to 1.2, and the y-axis ranges from 0.0 to 1.2. A dashed diagonal line represents the identity line (y = x). Data points are colored by group: grey, blue, yellow, orange, light blue, purple, green, red, and pink. Most points are clustered around the identity line, indicating high predictive accuracy, though some outliers are visible, particularly at higher fitness values.
